

# Simulating the Point-Spread Functions of JWST and WFIRST Instruments

Joseph D. Long, Marshall D. Perrin, Roeland P. van der Marel

Space Telescope Science Institute

AAS 227

**STScI** | SPACE TELESCOPE  
SCIENCE INSTITUTE

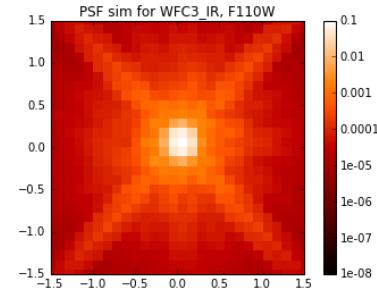

# WebbPSF

- Models all JWST instruments and now WFIRST WFI
- Developed at STScI to simulate JWST instrument PSFs (*Perrin et al. 2014, Proc. SPIE*)
- Inspired by TinyTim for HST (*Krist et al. 2011, Proc. SPIE*)
- Open source (on GitHub)
- Python-based
- Scriptable interface (with a GUI available)

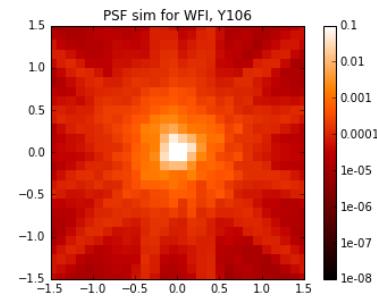

# Why simulate instrument PSFs?

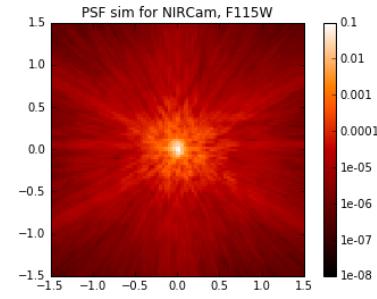

- Ground-based instrument PSFs limited by atmospheric seeing
  - Gaussian, Moffat profiles
- Spaceborne instrument PSFs
  - temporally stable
  - diffraction limited
- Used to improve photometry, astrometry, observation planning, and more

WFC3 IR, Hubble  
TinyTim

WFI, WFIRST  
Webbpsf

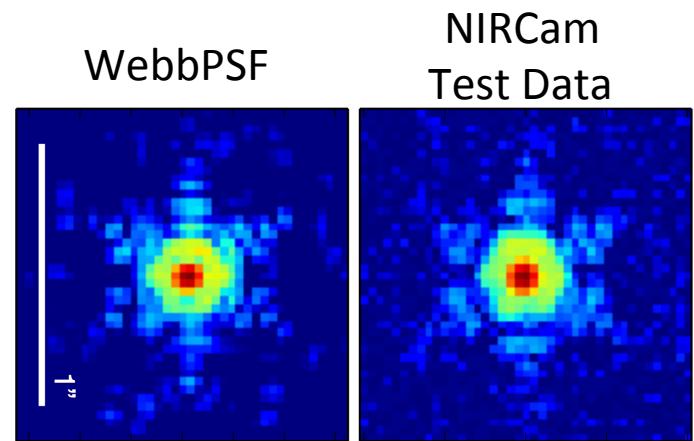

NIRCam, JWST  
Webbpsf

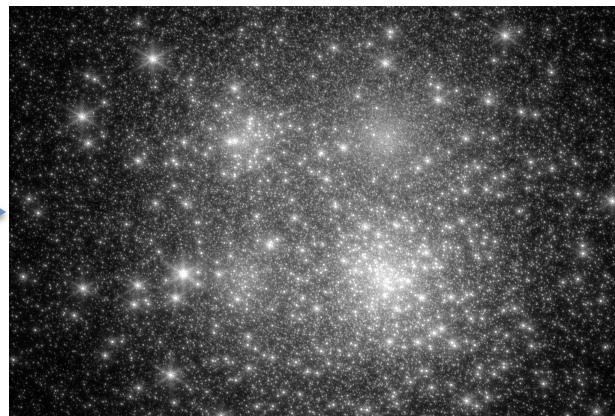

# Why simulate instrument PSFs before launch?

- Provide input to predictions about instrument performance
- Ensure our models agree with ground test data
- Use in exposure time calculations
  - JWST ETC (Pandeia)
- Use to simulate scenes
  - STIPS: Space Telescope Image Product Simulator

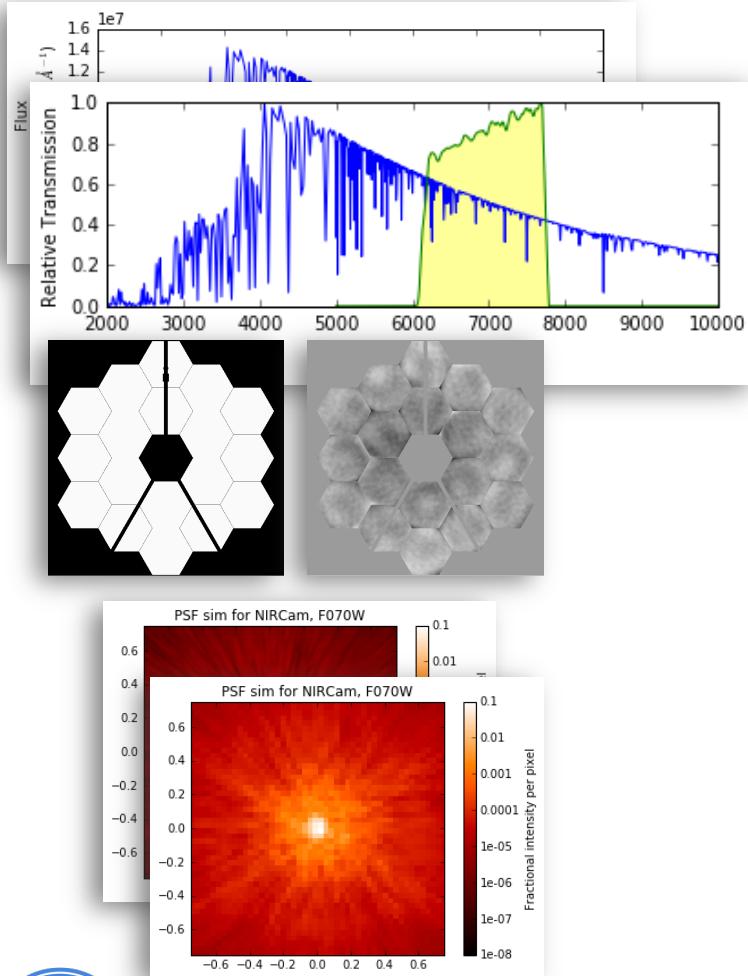

*Perrin et al. 2014, "Updated Point Spread Function Simulations for JWST with WebbPSF"*

# Walking through a PSF Calculation

Source spectrum

Filter transmission

(sets wavelength sampling)

Aperture shape & wavefront error

Fourier transformed to PSF

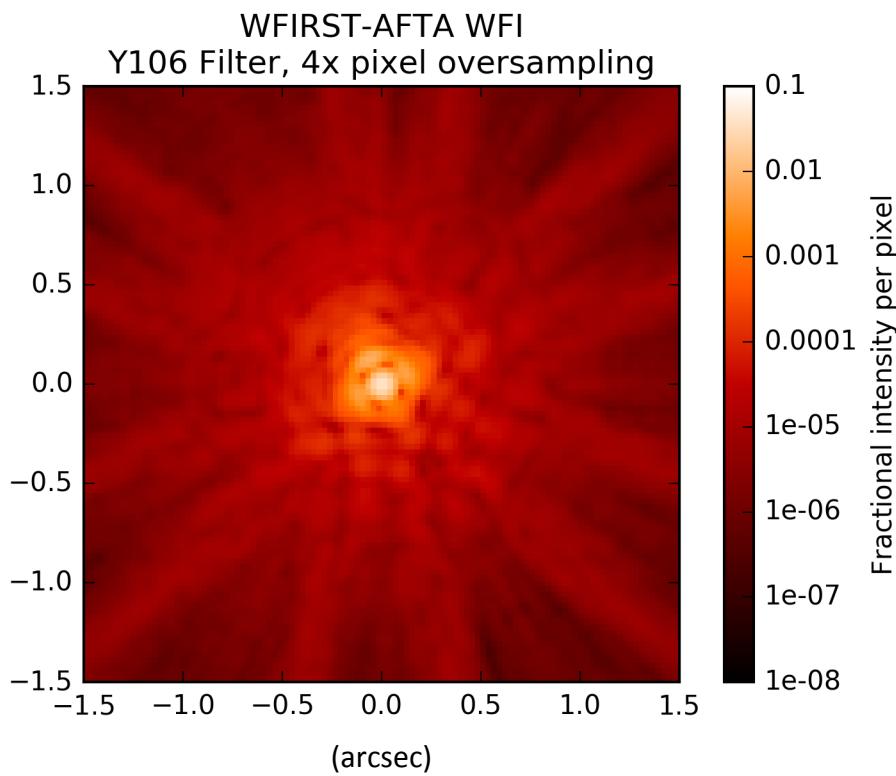

Plate scale

(sets spatial sampling)

# WebbPSF-WFIRST

- WebbPSF-WFIRST effort at STScI
  - Develop Wide-Field Instrument model
  - Provide to ETC and STIPS scene simulator teams
- Simulates field-dependent PSF aberrations
- Released to the community November 2015
- Based on the Cycle 5 reference design

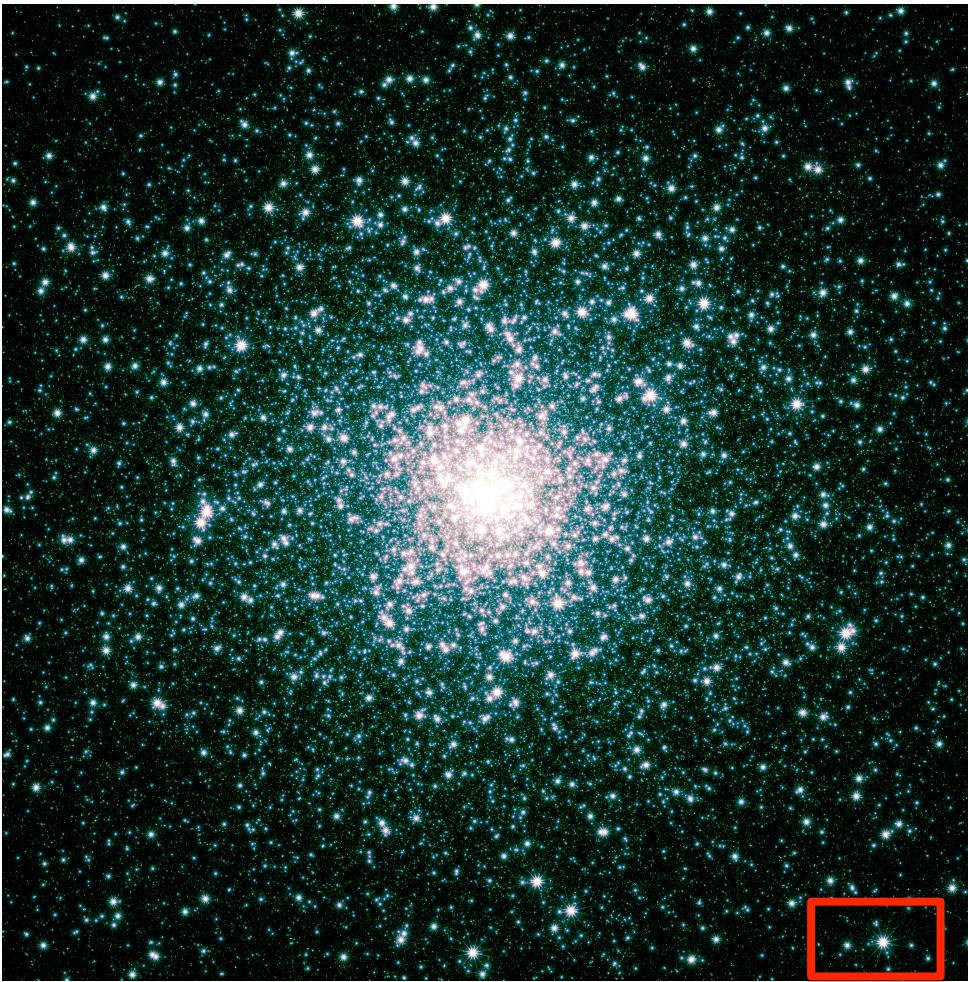

# WFIRST Wide Field Instrument

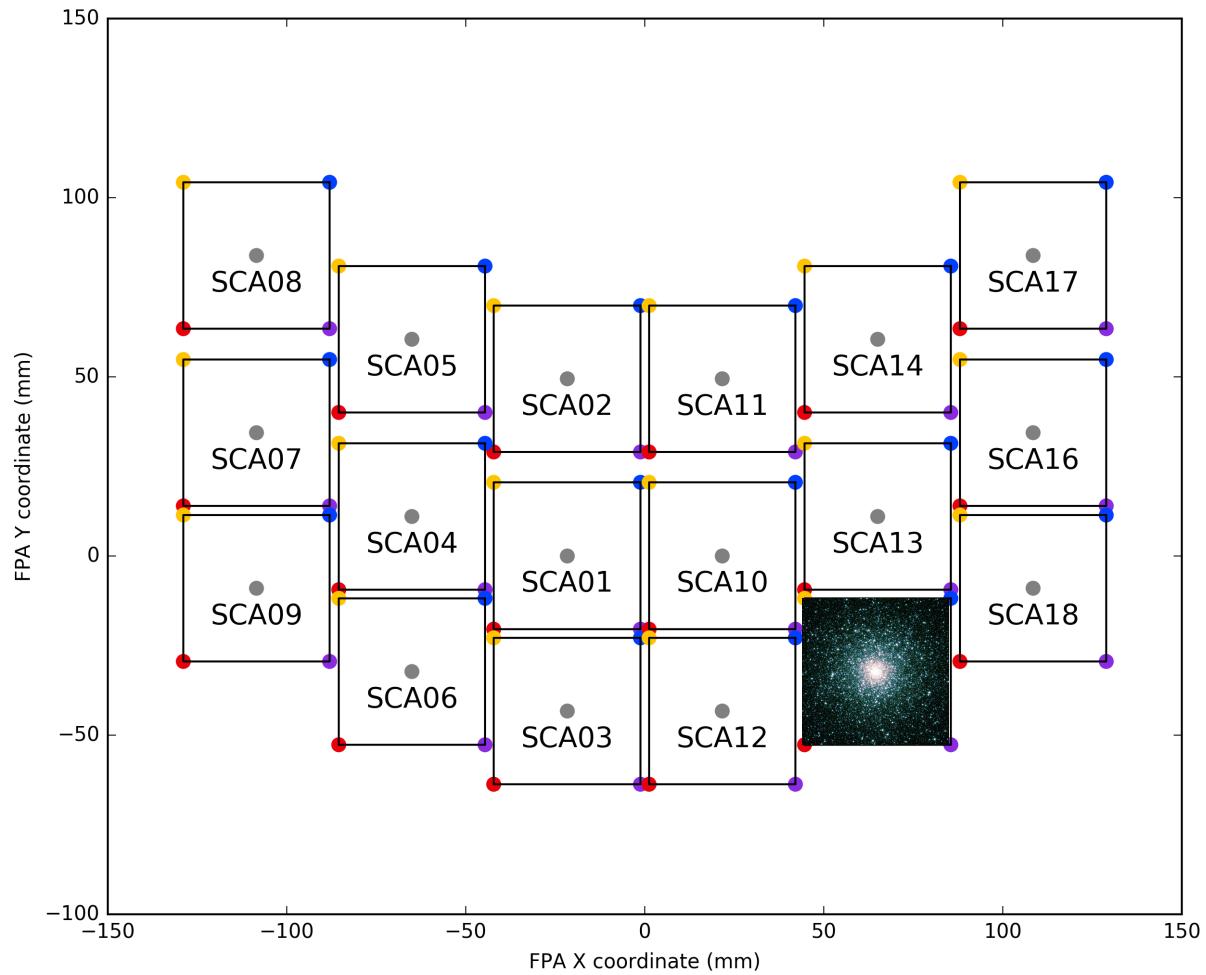

**STScI** | SPACE TELESCOPE  
SCIENCE INSTITUTE

# WFIRST Wide Field Instrument

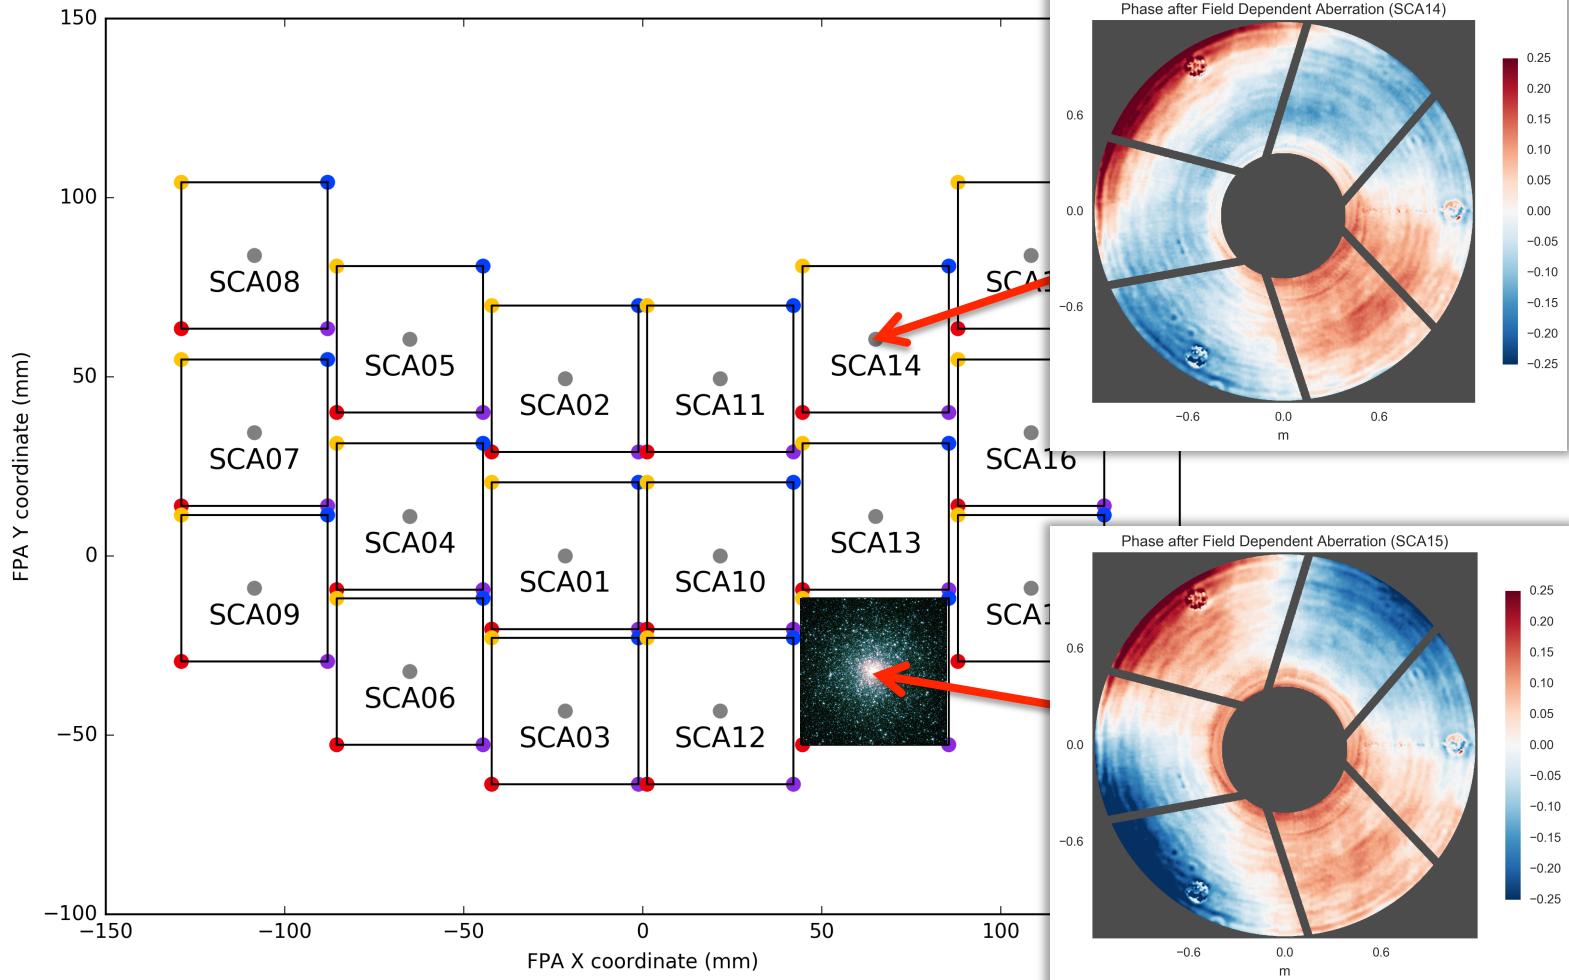

**STScI** | SPACE TELESCOPE  
SCIENCE INSTITUTE

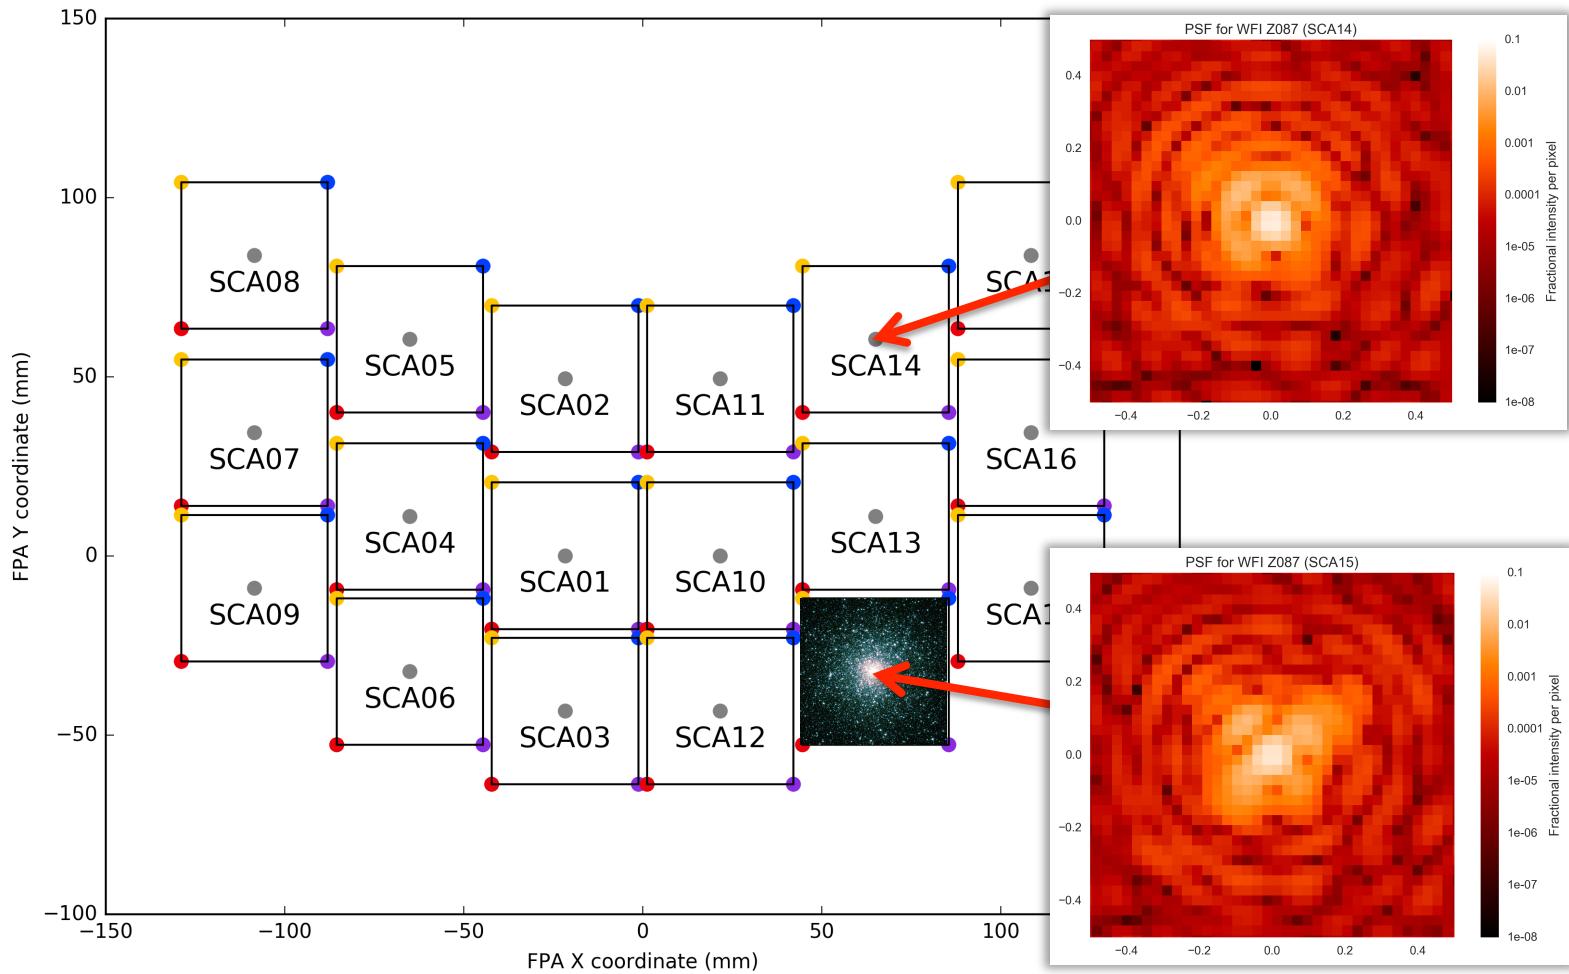

# WFIRST Wide Field Instrument

# WFIRST Wide Field Instrument

# WFIRST Wide Field Instrument

# Future Work

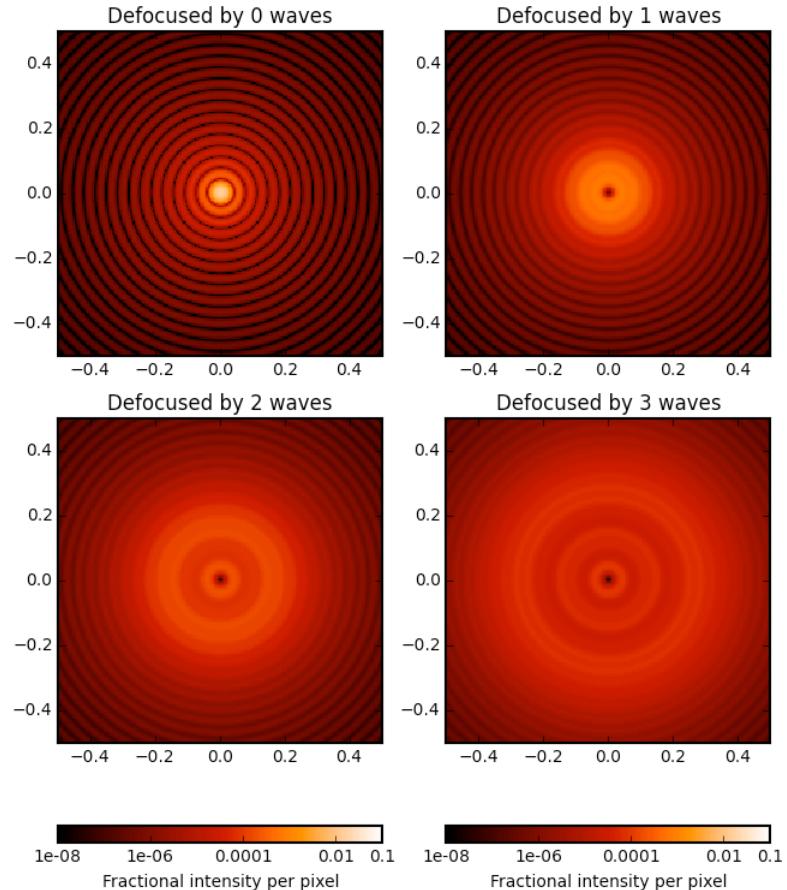

- Field dependent PSF variation in JWST instruments
- Coronagraph simulation for WFIRST ETC
- Geometric distortion of apparent pupil shapes with field position
- Other fixes and features by community request!

# POPPI

## *Physical Optics Propagation in Python*

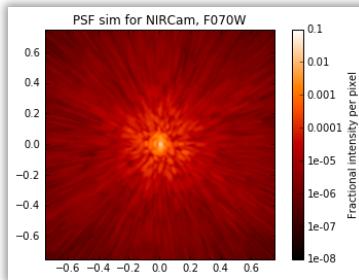

- Not mission-specific
- Used to build WebbPSF instrument models
- Fraunhofer domain (Fourier-transform based) optical systems
  - And, since November 2015, Fresnel propagation! (Thanks, Douglas Ewan)
- Define optics as FITS files or analytic functions
- Parallelize calculations across CPUs

# Questions?

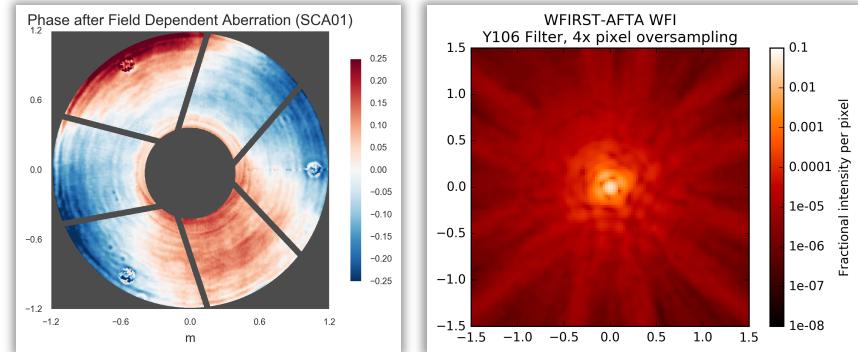

## WebbPSF

- Simulate monochromatic and broadband PSFs for all JWST instruments
- Install it today!  
[tinyurl.com/webbpsf-install](http://tinyurl.com/webbpsf-install)

## WebbPSF-WFIRST

- Included in WebbPSF, simulates WFI
- Come see us at the STScI booth for more info!
